REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

In WO 138, the aqueous glycolic acid solution used is a 70 % technical grade aqueous solution (see page 3, lines 14 to 15 of WO 138). That is, the glycolic acid solution produced in WO 138 has a water content of 30 % by weight, which is outside the range of characteristic (a) (5 to 20 % by weight) required in claim 1 of the present application.

As shown in a side by side comparison between with Examples 1 to 5 of WO 138 and working examples of the present application in Exhibit 2 of the accompanying Declaration under 37 CFR 1.132, high purity, high yield and short crystallization time are not achieved in WO 138 because the water content is outside of that required by the instant claims. Therefore, WO 138 is silent with regards to the unexpected results of the instant invention with regard to water content of an aqueous solution of glycolic acid, and therefore, fails to motivate those of ordinary skill to modify its disclosure to include a water content from 5 to 20% by weight.

An updated search of the prior art failed to uncover a reference that either teaches the required water content or motivates those of ordinary skill to provide and aqueous solution of glycolic acid, as required by the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
